

Fibre 1

5 REASONS YOUR BUSINESS NEEDS **4G**

HIGH QUALITY VIDEO CALLS

Avoid pixelated, broken and frozen conversations, 4G allows employees to make clear video calls in real time, ensuring effective communication can be maintained at all times.

RAPID UPLOAD

Super fast upload speeds are as important as swift download speeds. As 4G is up to seven times faster than its predecessor, users can share content, such as photos, files or video quickly.

INTERNET BROWSING

Speed is everything, with 4G, users benefit from rapid download speeds. Quickly browse web pages, download large files easily and most importantly buffering is a thing of the past.

REMOTE WORKING

The expansive 4G network enables businesses to respond and make effective decisions even when on the move. By pairing a device with the cloud valuable data can be accessed securely.

BACK-UP SERVICE

Fibre not installed yet? Plug and play, even before your installation. Always stay connected. 4G connections can be used for internet connectivity if your business broadband ever has disruption to services. No downtime = no loss of money.
